It appear
T is closely associated with, the erythrocyte receptor.

This clone is available from RZPD, Contact RZPD (customer.service@rzpd.de) for further information. Contact RZPD (customer.service@rzpd.de) for further information. This CDS clone is part of a collection of human full ORF clones jointly established and verified by the Harvard Institute of Proteomics (HIP) and RZPD. This CDS has been cloned without stopcodon. This CDS has been inserted into pDONR201 via a BP Clonase(TM) reaction. Additional sequence has been added in front of the start codon: att. AAAAAA GGA GGC TCC ACC (ATG). The last codon is followed by the 3' att site: GACCCAGCTTCTT. att The last codon is validated by full sequence check. Compared to the reference sequence NM_003874 (GI:4502686) we found AA exchange(s) at position (first base of changed triplet):

Diagnosing susceptibility to schizophrenia (SCZ) in a patient, by determining presence or absence of an allele of a linked polymorphic marker present on chromosome 1q22, were the marker is linked to a variant form of the SCZ gene.

Example 6; Page 70; 82pp; English.

Human Human

This sequence is encoded by the SCZ gene which was isolated using the method of the invention. The SCZ gene has been previously identified as CD84, GenBank Accession No: NM 003874. CD84 is a 73 kDa antigen present on platelets, monocytes and circulating B cells. This protein may be involved in the processes by which the brain responds to biological stimuli. Therefore they may provide targets for therapeutic intervention in the treatment of schizophrenia. The SCZ sequence may be used in a new method comprises determining the presence or absence of an allele of a linked polymorphic marker in the DNA of the patient. The polymorphic marker is present in chromosome 1q22 and is linked to a gene (SCZ) having

and SLAM associated protein (SAP) motifs. CD2000 DNA and protein is useful for treating disorder such as immune proliferative disorders, immune disorders (e.g. carcinoma), viral infection, autoimmune disorders (e.g., arthritis, multiple socierosis, Garve's disease, and Hashimoto's disease), T cell disorder (e.g. acquired immune deficiency syndrome (AIDS)), inflammatory disorders (e.g. crohn's disease and ulcerative (c.ditts), inflammatory disorders (e.g. theumatory syndrome octoarthritis), allergic inflammatory disorders (e.g. asthma and cortacthritis), apoptotic disorders (e.g. systemic lupus erythematosus, and insulin-dependent diabetes mellitus), cytocoxic disorders, espetic shock, cronic obstructive pulmonary disease (e.g. emphysema), bronchitis, cachexia, jaundice, hepatic circulatory disorders, hepatitis, cirrhosis, acute myeloid leukaemia, haemophilia and anaemia CD2000 DNA is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical crials and pharmacogenomics), and in methods of treatment (e.g. therapeutic and prophylactic). The present sequence is human CD84 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The invention relates to treating a subject having a condition that benefits from modulating the balance of regulatory T cell function to relative to effector T cell function, or vice versa, in a subject. The method involves administering an agent that modulates the expression or activity of a molecule selected from PTGER2 and TGFbetal, or Jagged-1, CG PRR-32, CD89, GD89, serctonin R, BY55, serctonin R20, PDB-4d, and PI-CG histamine R-H4, GPR58, EPO-R, PSG-1, PSG-3, PSG-6, PSG-9, PDB-4d, and PI-CG are useful for diagnosing, preventing or treatment occurs. The methods are useful for diagnosing, preventing or treating conditions or regulatory T cell response to antigens associated with the condition, such as in an claim response, an autoimmune disorder, a viral infection, a microbial infection, a parasitic infection a tumour. The present sequence represents a human leukocyte differentiation CD84 antigen, preferentially expressed in regulatory T cells.
                                                                                                                                                                                                                                                                                                    Treating a condition that benefits from modulating regulatory or effector T cell function comprises administering an agent that modulates the expression or activity of a gene or polypeptide (e.g. PTGER2, TGFbetal,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                           The present invention relates to PRO proteins and their coding sequences.
The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polysaccharide antigen unresponsiveness, selective IgA deficiency, intermediate lymphoma, follinemia of infancy, Burkit's lymphoma, intermediate lymphoma, follicular lymphoma, type II hypersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or ankylosing spondylitis. The PRO proteins are also useful for preparing a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarched of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic sarcoma, possibly via gene therapy or vaccine production. The nucleic fact sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                142 MASVNSTCNVTLTCSVEKEEKNVTYNWSPLGEEGNVLOIFOTPEDOELTYTCTAONPVSN 201
